

MS SS 179PS

- Photoperiod sensitive
- Large stalk and long leaves
- Excellent lodging resistance
- 20+ leaves
- Outstanding yield potential

A multi-leaf high tonnage hybrid forage sorghum used for silage, green chop, grazing, and hay. Leaves can reach 4 inches wide and 3 feet long. This hybrid is photoperiod sensitive and needs 12hrs. 20mins. of day length to remain vegetative. The continuous production of leaves results in enhanced quality of forage. Depending on location and time of sowing a 150-160 day growth can result in very high yields. The hybrid can be harvested 3-4 times per season for pasture or hay (optimum time of hay harvest is around 70 days after sowing) or only once for silage.
